# Coatings

In a world where the elements -- rain, snow, hail and sun -- are relentless in their cyclical attack on your building, Republic offers single ply and coating solutions to protect your roofing and building assets. Providing waterproofing and weatherproofing solutions for more than 50 years, we gauge our growth and strength with each new product improvement and invention. As new polymers are created, chemical compounds discovered, and technology improved, Republic continues to provide up-to-date solutions for all your restoration needs for most roof systems and building surfaces.

### Roof restoration.

An economic solution to your roofing problems -- patching, repairing, and maintaining your roof all-in-one. The proper roof coating will provide your roof with a strengthening shield, protecting your roof against damaging ultraviolet rays and ponding water.

### Protection for walls and building surfaces.

Many of our roof coatings offer the same waterproofing and weatherproofing strength to protect and recondition masonry walls and surfaces. Adding a flexible, breathable coating can extend the life of your building's masonry walls and surfaces by sealing small cracks and resisting water entry.

Whatever your waterproofing needs, our products are developed under strict quality standards and warranted for years to ensure your trust. Our independent sales representatives, supported with diagnostic tools and resources from Republic, strive to deliver products and service beyond your expectations. By establishing these direct relationships, we have come to understand your needs and concerns for your building assets.

Republic has built its reputation by providing the right solution for your roofing and building problems through our products, services and people. These three components are all part of our goal for waterproofing, weatherproofing, and protecting your roofing and building assets against the elements.

### GEOGARD Elastomeric Coating

GEOGARD, a proven restoration coating, is designed to extend your roof's life by forming a waterproofing and weatherproofing seal. As a high performance, monolithic roof coating, it bonds to a variety of substrates including single plies, modified bitumen, BUR, and even, polyurethane foam roofs. An established specialized patch and repair material, GEOGARD combined with a reinforcement material, easily repairs roof blemishes such as failed seams, blisters and flashings.

The GEOGARD flexible base coat provides waterproofing protection, while the white reflective finish provides excellent ponding and chemical resistance. GEOGARD repairs substrate deficiencies, seals cracks, and provides energy savings. Not only does GEOGARD extend your roof's life, but also provides an aesthetically pleasing white reflective surface that reflects up to 85% of harmful rays from the sun.

### SOLARGARD ULTRA

SOLARGARD ULTRA is a one-coat, high-solids acrylic roof coating. It provides a reflective, waterproofing surface that is unique in the industry because it restores a variety of roof surfaces including weathered single ply, smooth modified bitumen, polyurethane foam, concrete and built-up roofs. Available in white, 16 standard colors and custom colors, this low-VOC coating is often used to provide an aesthetically pleasing roof surface as it protects and waterproofs.

### SOLARGARD HY-BUILD

SOLARGARD HY-BUILD coating for metal roof systems provides flexibility even in extreme temperatures, resistance to hydrolysis, and stability to ultra-violet rays, which is the essence of a truly high-performance elastomeric coating. The pure acrylic-based elastomeric roof coating is resistant to yellowing and chalking. Maintaining its white color, SOLARGARD HY-BUILD reduces roof temperatures as much as 60 degrees. Once applied, SOLARGARD HY-BUILD provides a very effective barrier against water intrusion.

SOLARGARD HY-BUILD is also designed to patch, repair, seal, protect and beautify walls of concrete, masonry, brick and stucco. The one coat coverage of SOLARGARD HY-BUILD hides surface defects, bridges hairline cracks and fills pores to provide a weatherproofing seal. In addition to its watertight seal against water, SOLARGARD HY-BUILD reflects up to 85% of the sun's harmful rays and is resistant to yellowing or chalking.

### ALUMANATION 301

ALUMANATION 301 protects your metal roof and walls from rust and corrosion, eliminating the need for costly metal panel replacement. This premium, asbestos-free, aluminum-fibered coating provides outstanding corrosion, waterproofing and ultraviolet protection. Excellent for new roof protection or roof restoration, ALUMANATION 301 provides a brighter surface with higher reflectivity than standard roof coatings. With this increased reflectivity roof temperatures will be lower, reducing your cooling costs. Applied easily in one coat, ALUMANATION 301 typically performs 12-15 years before recoating is necessary.
